

**Red Orache Semi-natural Herbaceous Vegetation (Map Code 61)**

**Plot 51**

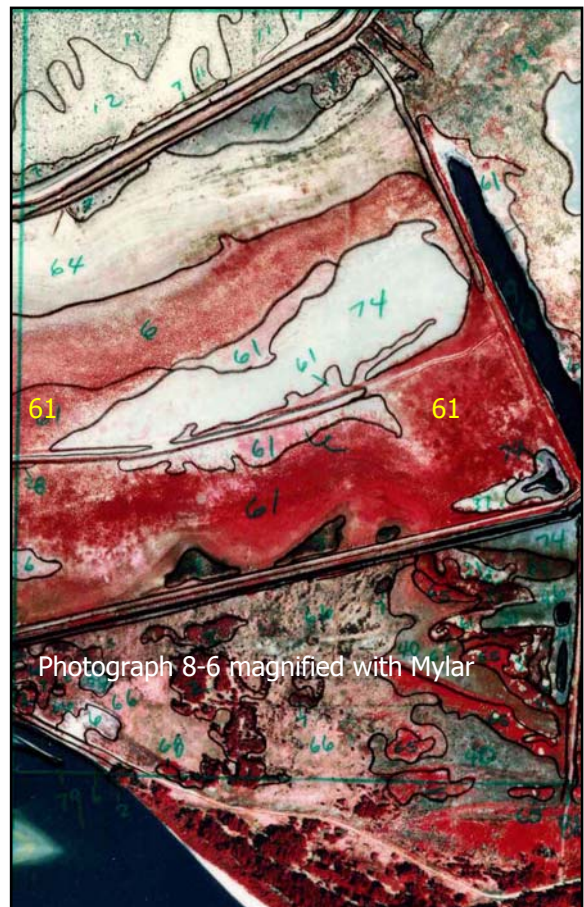

Location *Atriplex rosea* Semi-natural Herbaceous Vegetation has become established in drying basins of Leota Bottom, Sheppard Bottom, and Johnson Bottom within the floodplain of the Green River.

**Plot 67**

*Signature:* This monotypic vegetation type was very lush and green at the time of the photography producing a very bright red signature. Also, due to varying density the amount of bare ground changed across the stands creating a smeared or blotchy signature with whitish areas. This type was very low growing yielding a smooth or non-textured signature.
